

# PRECISE POND™

## ENHANCEMENT

## Nutrient and Sludge Metabolizer

When algae dies, it sinks to the bottom of lakes and ponds where it contributes to the development of a sludge layer and decreases water volume. As the sludge layer decomposes, nitrates and other nutrients are released into the water column, providing a food source for new algae and other aquatic weeds.

Precise Pond accelerates the breakdown of partially decomposed organic matter, waste and sludge at the bottom of lakes and ponds. It improves water clarity and quality, reduces the need for harvesting, dredging and algaecides and eliminates foul odors.

For the best results, apply Precise Pond before algae develops. However, Precise Pond may be applied at higher application rates when algae is present. Precise Pond is also ideal for use with aquatic herbicides and lake dyes in a comprehensive water management program.

### Features & Benefits

- Concentrated "function specific" formulation provides 20 to 30 times more activity than ordinary biologicals
- Improves water clarity and quality
- More concentrated than ordinary biologicals
- Reduces the need for harvesting, dredging and algaecides
- Easy to use 1/2 pound water-soluble packets
- Eliminates foul odors

### USE RATES:

- **Large Ponds and Lakes (2+ acres):** Apply 1/2-pound water-soluble packets in a uniform 20-foot to 50-foot grid pattern across lake, via boat, for even distribution.
- **Small Ponds (0–2 acres):** Throw 1/2-pound water-soluble packets into water, distributing them evenly across the pond.

Please check with your Aquatrols distributor for available pack sizes.
