

ENHANCEMENT

## Don't Let Winter Winds Desiccate Your plants

The cold, drying winds of winter months can be damaging to exposed plants, robbing them of essential leaf moisture they need to survive the season. Give your plants the protection they need with LeafShield.

LeafShield provides safe, effective and affordable protection against desiccation injury. When applied to landscape plants, it dries to a thin, flexible layer that will not discolor plants.

### Safe, economical and easy to use.

LeafShield is odorless, non-sticky, and mixes easily with water. It washes effortlessly out of spray equipment with soap and water so cleanup is a breeze. It can be applied in sunny or cloudy conditions, further increasing ease of use.

### Features & Benefits

- Protects plants against desiccation injury.
- Safe for use on all plant types.
- Stays flexible and will not discolor foliage.
- Will not clog nozzles or damage sprayer pump seals.
- Costs less than similar products.
- Makes holiday greenery last longer.

### USE RATES:

Spray LeafShield at 2 oz/1000 sq ft with a spray volume of 1–2 gal/1000 sq ft. LeafShield can be safely tank mixed with contact snow mold fungicides. Do not mix LeafShield with any pesticide unless pesticide label specifically permits tank mixing.

*See label for complete usage information.*
