

**ENHANCEMENT**

## Ensure Uniform Spreading and Coverage of Foliar Products

Waxy leaf surfaces can cause spray droplets to bead up, resulting in coverage gaps that can reduce the efficacy of foliar sprayed materials. CapSil allows foliar directed sprays to spread evenly over the entire leaf surface, giving you full coverage with every application. CapSil ensures that you get the results you expect from foliar nutrients and pesticides without the added labor and expense of repeat treatments.

CapSil is a 100% active blend of organo-silicone and non-ionic surfactants that enables solutions to spread over the entire leaf surface evenly.

### Features & Benefits

- Uniform spreading and coverage of all foliar applied products
- Reduced instances of wilt and disease
- Safe to use – no concerns of leaf burn

**For Organic Use**

*OMRI's independent review certifies our compliance with national organic standards for production and processing. This gives our customers the peace of mind that CapSil is approved to use in their organic operations.*

### USE RATES:

**As an adjuvant with herbicides and/or micronutrients:**

Apply CapSil at a concentration of 6-16 fl oz per 100 gallons of spray solution.

**As an adjuvant with insecticides/miticides, fungicides and/or use with foliar feed:**

Apply CapSil to water-soluble fertilizers at the rate of 6-12 fl oz per 100 gallons of mix.

*See label for complete usage information.*

Please check with your Aquatrols distributor for available pack sizes.

## Improving Performance of Foliar Directed Sprays

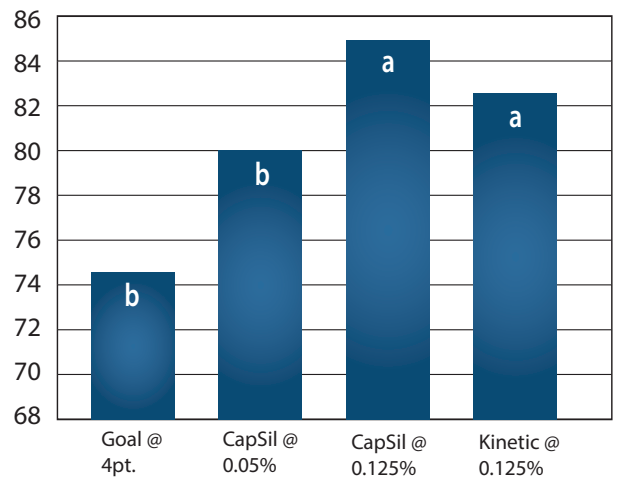

### The Challenge: Foliar targeted sprays often do not coat leaves uniformly

The waxy cuticle and the pubescent surfaces of leaves can cause spray droplets to bead up, preventing them from spreading uniformly over the leaf surface. The result is gaps in coverage which can reduce the efficacy of foliar sprayed materials. Less than optimal absorption of foliar nutrients and pesticides will also lead to less than expected or desired results. Additional product and labor for repeat applications can increase your overall costs significantly.

### The Solution: CapSil ensures uniform spreading and coverage

CapSil ensures uniform spreading and coverage, maximizing the effects of any foliar-directed application, including micro-nutrients, fungicides, insecticides and PGRs. This 100% active blend of organo-silicone and non-ionic surfactants allows foliar directed sprays to spread over the entire leaf surface evenly, giving you full coverage with every application. And research shows that CapSil is more effective than other surfactant based products at getting the job done.
