

ENHANCEMENT

Foam Suppressant

Spray tank foaming can present a number of challenges during liquid ice melt applications. Foam in the tank increases the likelihood of spillover and also slows down the mixing and loading process. Excessive foam can also cause inaccurate dilutions of expensive chemicals, improper spraying patterns and incorrect chemical calibrations.

Knockdown is a foam suppressant that is designed to quickly defoam spray solutions.

Features & Benefits

- Neutralizes high density foam
- Can be added before or after foam formation
- Prevents foam spillover
- Reduces mixing and loading time

USE RATES:

- **Antifoam method:** Use 1-4 ounces per 100/gallons of solution. Add entire volume of KNOCKDOWN needed for load when tank is 1/4 full.
- **General defoamer:** Use 2-4 ounces per 100/gallons of solution. Add to spray solution at point of greatest agitation.

Please check with your Aquatrols distributor for available pack sizes.

See label for complete usage information.
