

Hydration and Infiltration

Precip G is a flexible granular soil surfactant that captures and conserves irrigation inputs for a broad range of use sites. Precip G increases the infiltration of water into the soil and improves the length of hydration, while the limestone carrier quickly dissolves to release the wetting agent into the soil and does not leave residue behind on equipment, such as mower rollers. Precip G should be applied as a preventative water management strategy.

Features & Benefits:

- Increased water infiltration to optimize irrigation and rain inputs
- Longer hydration for water savings over time
- Great for sports fields, green and tee surrounds, bunker banks, lawns, and ornamental beds

PACKAGING:

50 pound bag

USE RATES:

Lbs of Product per 1,000 Sq. Ft.	Lbs. of Product per Acre	Square Feet per Bag	Oz. of PRECIP per 1000 Sq. Ft.
