

HYDRATION

Infield Skin Maintenance

The ability of your infield to uniformly retain and move water affects the safety and performance of the playing surface. In-Flow is a granular soil conditioner and surfactant that influences water's ability to flow into and throughout the profile of infield skins. This helps sports turf managers find the desired balance between water retention and movement, resulting in a better performing infield over a longer period of time.

Features and Benefits:

Infiltration surfactant that reduces surface tension for faster and more uniform penetration

- Use less water to get optimal playing conditions
- Reduces migration of infield material into turf

Hydration surfactant molecule attaches to soil particles and evenly disperses water

- Maintains moisture level for longer
- Enhances performance of calcine clay conditioners

Multi-functional carrier is readily biodegradable and improves profile structure

- Beneficial for all surfaces, both turf and infield
- Environmentally safe, economical, and easy to use

Application Recommendations:

- Irrigate after application with overhead sprinkler or hose to activate ingredients.
- IN-FLOW can also be applied ahead of rain as a proactive approach to moisture management.
- Use a water volume that sufficiently wets profile to desired moisture level.

USE RATES:

5 lbs. per 1,000 sq ft
monthly or as needed

See label for complete usage information.

Please check with your Aquatrols distributor for available pack sizes.
