

HYDRATION

Hydration and Infiltration

Soil surfactants are chemistries which aid in the efficient and responsible management of water. At The Aquatrols Company, we understand the need for developing products to help growers with proactive water management solutions for all areas of their property.

Precip is a water conservation soil surfactant balancing performance with affordability. It is a specific blend created to enhance the infiltration of water and increase soil hydration over extended periods of time.

Features & Benefits:

- Increased water infiltration to optimize irrigation and rain inputs
- Longer hydration for water and labor savings over time
- Affordable cost for expanded use over large acreage

USE RATES:

2-8 fluid ounces per 1000 ft²

Reapply every 14-28 days at the 2-4 fluid ounces per 1,000 ft² rate.

Use higher labeled rates for longer duration.

See label for complete usage information.

Please check with your Aquatrols distributor for available pack sizes.
