

## Ensures Uniform Movement, Distribution & Availability of Water in the Rootzone

Primer Select enhances turfgrass uniformity by establishing matrix flow in the rootzone, increasing water use efficiency in treated areas of intensively managed turf. By combating water repellency throughout the entire rootzone and moving water deeper into the profile where established root systems are, the utilization of water will be more effective and the turf's resistance to stress and disease will be greater.

Primer Select allows you to adjust the application rate and frequency to more closely match your climate, soil type and spray program needs. It is safe to use throughout the entire growing season for all turf species and in all climates.

### Features & Benefits

- Establishes Matrix Flow through the rootzone.
- Penetrates water more deeply through the rootzone.
- Enhances turfgrass uniformity.
- Increases water efficiency.
- Safe to use throughout the entire growing season.

### USE RATES:

- Apply 4-6 oz in 2 gallons of water per 1,000 ft<sup>2</sup> monthly. See label for complete information on variable rates to match your spray program timing.
- For best results, apply at least 1/3 inch (7.5 mm) of irrigation after application. If runoff or puddling occur, water in using cycle/soak runs until 1/3 inch (7.5 mm) is achieved. Irrigate before next mowing.

*See label for complete usage information.*
