

Convert™

Compatibility Agent

More Tank Mixing Results in More Compatibility Problems.
It's that Simple.

Liquid fertilizers, micronutrients, cold water temperatures, hard water and other tank mix partners can all challenge the emulsifier systems of many crop protection products. This can disrupt proper emulsification and create “cottage cheese” or oily films that plug screens and nozzles. This same incompatibility can reduce the performance of the tank mix and lead to cross-contamination problems. Convert is a unique compatibility agent and spreader specifically designed for complex tank mixes. Convert delivers consistent blending performance across the widest range of tank mix partners and carriers.

Features & Benefits

- Optimizes compatibility and prevents the formation of “cottage cheese” type precipitates that plug sprayer lines, screens and nozzles
- Helps prevent residue build-up and makes sprayer clean-out easier and faster for less risk of cross contamination*
- Improves spray solution coverage on target leaf surfaces
- Ensures more of your crop protection dollars go on the turf uniformly for optimum performance

ENHANCEMENT

* Using Convert is not a substitute for using an effective tank cleaner or following good sprayer clean-out procedures.

USE RATES:

- Use 1–4 pints of Convert per 100 gallons of spray solution to prevent antagonistic tank mixing conditions.
- Use 3–6 pints of Convert per 100 gallons of spray solution to correct tank mix incompatibilities.

See label for complete usage information.

Please check with your Aquatrols distributor for available pack sizes.
