

ENHANCEMENT

Lake and Pond Dye

For years aquatic managers have used dyes to improve the aesthetics of lakes, ponds and fountains. Although blue remains the color of choice for this use, many professionals are turning to black because of the mirror-like appearance that it imparts.

Jet Black is a proprietary blend of environmentally friendly, nontoxic, water-soluble black dyes formulated to reduce sunlight penetration and impart a natural black color when applied to any water feature. Jet Black EZ SoluPaks are protected by a unique, waterproof, foil-lined overpack to prevent accidental staining while handling.

Features & Benefits

- Black, reflective color.
- Available in unique packaging that eliminates risk of staining during handling.
- Every overpack is fully labeled to prevent misapplication.
- No irrigation or recreational restrictions.
- Nontoxic.
- Packed in six 5.25 ounce EZ SoluPaks per carton, four cartons per case.

USE RATES:

- Each JET BLACK EZ SoluPak will effectively treat one (1) acre foot, or approximately 325,852 gallons of water.

See label for complete usage information.

Please check with your Aquatrols distributor for available pack sizes.
