

ENHANCEMENT

Improved Spray Application Accuracy with Our Full Line of Signal Products

Signal is the spray colorant and landscape management tool that makes tough jobs simple—it's brighter and easier to see.

Signal guarantees spray accuracy and eliminates waste due to skips and overlaps. Signal not only guides the spray path, it also indicates unwanted drifting and reduces overspray.

Our Signal product portfolio is designed to be added to spray solutions containing plant protectants, foliar nutrients and other liquid sprays. Signal quickly and easily dissipates, won't permanently stain and is perfectly compatible with all water soluble mixtures.

Features & Benefits

- Highly visible evidence of applications
- Eliminates waste due to spray overlaps and skips
- Temporary, non-staining color
- Allows applicators to detect drift and improper application
