Soil Surfactant Tablets Best Use Practices

HYDRATION

Soil surfactant tablets are an easy and convenient option to address water management issues like localized dry spot. To maximize the performance and efficacy of the surfactant tablet please practice the following recommendations.

Storage and Handling

- Transport in a cool and dry environment to protect their integrity and performance.
- Storing and transporting in a refrigerated container has been shown to further increase the longevity and surface area coverage of surfactant tablets.

Application

- Apply the surfactant tablets with the appropriate commercial hose applicator.
- Remove the lid but do not remove the product from the container.
- Place the opened container into the canister of the applicator with the opening in the upright position or facing the flow of water.
- Secure the canister to the applicator and make the application.
- Make sure to flush hot water from hose before using tablet.
- Expel any air from hose to prevent water hammer from shattering tablet.
