

MAGNAPLEX is a combination of surfactants designed to increase volumetric water content and improve water infiltration.

Directions for Use

GENERAL INFORMATION: Always mix and apply Magnaplex in accordance with label instructions. Follow the application and mixing guidelines below. Magnaplex may be included in pest control programs with plant protectants.

WHERE TO USE: MAGNAPLEX IS SUITABLE FOR USE ON GOLF COURSES, ATHLETIC FIELDS AND RESIDENTIAL OR COMMERCIAL TURF, UNDER THE SUPERVISION OF GOLF COURSE SUPERINTENDENTS, SPORTS TURF MANAGERS OR PROFESSIONAL LANDSCAPE CONTRACTORS.

USE RATES:
SPRAY APPLICATION: Apply MAGNAPLEX at the rate of 5 ounces (148 ml) in a minimum of 1 gallon (3.79 L) of water per 1,000 square feet (92.9 m²) of turfgrass.
INJECTION: Apply 32 ounces (946 ml) in a water volume sufficient to treat one acre (.40 ha).
APPLICATION INTERVAL: MAGNAPLEX should be applied every 30 days or when localized dry spot or water-repellent soils become evident.

APPLICATION TECHNIQUES: Apply MAGNAPLEX prior to the onset of turf stress or conditions that promote soil hydrophobicity, to achieve the best results. MAGNAPLEX does not require irrigation after application. Watering after the application will improve results by moving the product through any thatch/mat layer into the root zone.

MIXING INSTRUCTIONS: In the absence of specific mixing instructions found on the pesticide label, fill the spray tank with at least 50% of the desired finished carrier volume. When premixing in a mixing vessel or inductor, fill with at least 20% of the desired finished carrier volume.
