**ALYPSO** is a multi-purpose surfactant that significantly reduces the surface tension of water and improves the infiltration of rainfall and irrigation. ALYPSO may be tank mixed or used in conjunction with other soil surfactants or soil-active plant protectants.

**Directions for Use**

**GENERAL INFORMATION:** ALYPSO can be applied throughout the growing season without fear of discoloring sensitive turfgrass species. To achieve best results, apply ALYPSO prior to the onset of turf stress. ALYPSO is compatible in programs with most fertilizers and pesticides. Adjust use rates and application timing depending upon conditions.

**WHERE TO USE:** ALYPSO IS DESIGNED FOR USE ON GOLF COURSES, ATHLETIC FIELDS AND RESIDENTIAL OR COMMERCIAL TURF, UNDER THE SUPERVISION OF GOLF COURSE SUPERINTENDENTS, SPORTS TURF MANAGERS OR PROFESSIONAL LANDSCAPE CONTRACTORS.

**APPLICATION RATES, METHODS AND INTERVALS:**

**INJECTION:** Apply 16 ounces (473 ml) of ALYPSO into water volume sufficient to treat one acre (.40 ha) of turfgrass. Monitor results to determine levels of infiltration into the most difficult to penetrate turf areas. Adjust rate, up or down, in 2 ounce (59 ml) per acre (.40 ha) increments, until desired level of performance is achieved.

**SPRAY APPLICATION:** Apply 16 to 24 ounces (473 to 710 ml) of ALYPSO in a minimum of 60 gallons (227 L) of water to treat one acre (.40 ha) of turfgrass. Monitor results to determine levels of infiltration into the most difficult to penetrate turf areas. Adjust rate, up or down, in 2 ounce (59 ml) per acre (.40 ha) increments, until desired level of performance is achieved.

**INTERVAL:** Use ALYPSO monthly throughout the growing season. The application interval may be adjusted as needed.
