TRIPLO is a combination of surfactants designed to increase the movement of irrigation and rainwater into and throughout the rootzone of natural turf playing surfaces.

Directions for Use

GENERAL INFORMATION: Always mix and apply TRIPLO in accordance with label instructions. Follow the application and mixing guidelines provided in this label. To achieve the best results, apply TRIPLO prior to the onset of conditions that promote localized dry spot or plant stress. When applying TRIPLO with tank mix partners that achieve maximum efficacy by remaining on the leaf blade, irrigation may be delayed as specified on the tank mix partner's label. Apply water after the application to ensure product performance potential and safety.

WHERE TO USE: TRIPLO IS DESIGNED FOR USE ON GOLF COURSES, ATHLETIC FIELDS AND RESIDENTIAL OR COMMERCIAL TURF, UNDER THE SUPERVISION OF GOLF COURSE SUPERINTENDENTS, SPORTS TURF MANAGERS OR PROFESSIONAL LANDSCAPE CONTRACTORS.

USE RATES

SPRAY APPLICATION: Apply TRIPLO at the rate of 2.5 - 5 ounces (74 - 148 ml) in a minimum of 1 gallon (3.79 L) of water per 1,000 square feet (92.9 m²) of turfgrass. Apply TRIPLO at the rate of 110 - 220 ounces (3.25 - 6.5 L) in a minimum of 44 gallons (167 L) of water per acre (0.40 ha) of turfgrass.

INJECTION: Apply 32 ounces (946 ml) in a water volume sufficient to treat one acre (.40 ha). Monitor results to determine levels of water infiltration and plant stress and adjust rate until the desired level of performance is achieved.

DRENCH: Dilute 8 to 16 ounces (237 to 474 ml) in 100 gallons (279 L) of water and apply as a drench application.

MIXING INSTRUCTIONS: Fill the spray tank with at least 50% of the desired finished carrier volume. When premixing in a mixing vessel or inductor, fill with at least 20% of the desired finished carrier volume. While the carrier is agitating, add TRIPLO and continue the mixing process.
